

SANKHYAKARIKA

[Home](#)[Introduction](#)[Book details](#)[Sankhya Sutras](#)[Associated Articles](#)[Slides](#)

Scientists should be truly intrigued to learn that Sankhya is a complete unified theory based on axioms, unlike any other scientific theory today. Further, every numerical parameter, defining a stable state, like nuclear particle or even a galaxy, are derived from fundamentals without any external inputs of any kind. Even more extraordinary is the fact Sankhyan algorithms solve the anomalistic puzzles mathematically, in Physics and Cosmology, as the parapsychological and dark spectrum manifestations. Finally, it is a theory that completely removes the concept of anthropomorphic dependence to explain the existence of any Universe. Sankhyan algorithms confirm with proof that any sea of elemental components will self organise through axiomatic processes to create the phenomena of manifestation always and it cannot be stopped.

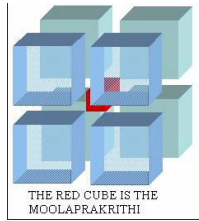

A major question posed by most scientists "can a numerical axiom based derivation, accurately predict all aspects of manifestation ?" The proof is already there in computer software binary language where a simple state identified as "one" turns to "not one", which has shown the capability of solving problems however complex. The same is true in reality where a "one" is "not one" due to a basic or axiomatic functioning of time in nature creating the principle of simultaneity along with its corollary of self similarity and scale invariance. The intellectual excellence of Sankhya lies in its austere logic that has identified the precise numerical value that keeps "one plus one equals one" under certain natural circumstances which proves axioms do rule manifestation processes.

IN OTHER WORDS SANKHYA IS THE ONLY THEORY THAT CAN DERIVE ALL THE STABLE PARAMETERS IN THE UNIVERSE FROM THE AXIOM $1 + 1 = 2$.

The foregoing should surely create the climate of intense curiosity that is needed to motivate intellectuals in science to make a paradigm shift towards an error free scientific knowledge. This box gives a short preview and has been inserted at the specific request of Physicists visiting this sight.

Why is Sankhya theory, derived by Maharishi Kapilla and given pride of place in chapter 2 of the Bhagavadgita, considered the acme of unified sciences? The prime reason is that only Sankhya theory defines and proves that the substratum of space is in an eternally dynamic state. The mathematical ansatz is derived through axioms and defined by the principle of self similarity in an elementary field of components and named here as the Perpetual Harmonic Oscillatory state or PHO. Hence automatically the proof of unification is provided through axiomatic mathematics, since there is only one PHO state and it forms the source of all forces but occurring at different levels of matter / energy densities. Therefore it provides the fundamental reason for the existence of both detectable and undetectable phenomena, thereby including the domain of spirituality as the submerged energy domain into the logic of holistic science. Further it gives accurate proof for the unproven hypothesis in Physics that the nuclear state never decays. Read the brief write up here ["Why is Sankhya correct ?"](#).

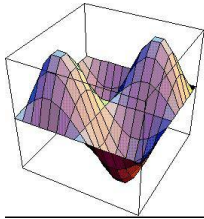

Friends, We are delighted to see hundreds of downloads from this site. Please go ahead freely for knowledge sets one free. Everything on this site is for you. The response from intellectuals is truly heartening. Can we trouble you to make a meaningful comment so that this website is made more appealing?. There is more specific information that we can send you if you can contact us on gsvasktg@gmail.com.

The component forming space is defined dimensionally. Each individual point form is called the [Moolaprakriti](#) or 'root activity' in Sanskrit. It can be visualised as the red cubic point between the eight larger blue cubes shown in the adjacent diagram. The blue cubes are only the agglomerate form of a large number of Moolaprakriti points in an interactive state and is called the [Purusha](#) state in Sanskrit. There are no equivalents to both states in Physics.

These components form the dynamic ocean we call space that provides the real foundation for the entire process of manifestation. The magic glue that binds all these extraordinary forms are the three phases of cyclic time that sustains the interactive state. The mathematical secret that unifies Moolaprakritis to form the larger blue cube as the dynamic Purusha hologram, is derived uniquely in Sankhya.

[See Sankhya slide It is a PPT Graphical display and is an overview of Sankhyan Excellence](#)

The miracle of a perpetually dynamic Universe is enabled when two opposing factors in an interactive state occur simultaneously. Compression and expansion are two opposing activities but when it takes place simultaneously, activity time is conserved and the dynamic state continues. The theoretical clue, lacking in Physics and Cosmology is the numerical algorithm that defines the threshold of simultaneously interactive states, which is also the key to gravitation phenomena. Newtons gravity constant and the fine structure constant are an approximation of precise axiomatic ratios that governs all phenomena in the Universe. Such an interactive activity among the sea of components in space is called a [Vriti](#) or vortex in Sanskrit and can be visualised as shown in the adjacent diagram. It is the most exotic process of interaction where dynamic space and cyclic time parameters are conserved totally at every instant. Therefore the dynamic aspect in space is sustained perpetually.

Its esoteric mathematical formulation called the [Perpetual Harmonic Oscillatory state \(PHO\)](#) is again unique to Sankhya for it can be derived only through axioms. In Sanskrit it is defined as [Aikantha](#), [Athyantha](#), [Atho](#), [Abhavath](#) state and collectively called the Tri-Guna interactive state or PHO.. It comprises the three cyclic activity states as Tama, Raja and Satwa corresponding to compressive collision, rebounding reversal and expansive separation leading to radiation. The foregoing activity occurs in three phases of simultaneous, resonant and sequential intervals of cyclic time, respectively. Maintaining the balance between the three modes of cyclic time is the key to eternal dynamism.

The consequence of eternal dynamism in space is the ability to extract abundant, clean and perpetual energy at the highest efficiency with minimum effort; all of which forms the greatest gift to humanity. You can read the complete details in the book [Secret of Sankhya](#). See contents of part 2 not on web yet as [Content 2](#). Read [Natural Law before Licence](#). See the Eclipse [Proof](#) for the Eclipse diagram as proof of Sankhya Theory obtained from the experiment on 15/1/10 during the total eclipse.

Another proof is there in the [Tsunami](#). The PHO file gives the reason for [Neutrinos faster](#) than light aspect. Abstract as comparison to Physics [Abstract.pdf](#). If you are interested in knowing how this abstract came about please see [Sanskrit Sutras](#) created thousands of years back.
